

## **ZTC Transport – Ananke – Manual**

Written for Ananke v0.2 and Ananke Payload Release v0.2

### **Recommended addons:**

Interplanetary MFD v5.1

AttitudeMFD v3.2

### **Automatic Payload Release**

1. Open the Orbiter Launchpad and under the Modules tab activate the AnankePayloadRelease module.
2. Select and launch a lunar intercept scenario from the ZTC Transport Ltd folder.
3. Activate the Ananke Payload Release dialog by pressing Ctrl-F4 and selecting “Ananke Payload Release”.
4. Arm the payload release in the Ananke Payload Release dialog.
5. The payload will automatically be released at the correct moment and you will be on your way to the moon.
6. Do mid-course corrections as desired using IMFD or TransX.

### **Navigation Lights**

By default, the navigation lights are automatically switched on when a scenario is loaded. They can be manually turned on/off using the ‘L’ key.
